Erasmus+ Programme
of the European Union

- – Researchers: to increase the number, quality and mobility of researchers and enhance Europe's attractiveness to researchers, focusing on open recruitment and portability of grants, social security and supplementary pensions needs of mobile researchers, employment and working conditions, and the training, skills and experience of European researchers.
- – Joint programming: to make research in Europe more strategic, more focused and more effective through Member States coming together to discuss common visions, prepare strategic research agendas on major societal challenges and set up joint programmes to implement these agendas.
- – Research infrastructures: to put in place a new EU-wide legal framework for the establishment and operation of new European research infrastructures (by means of a Council Regulation). ESFRI (European Strategic Forum for Research Infrastructures) continues to work on its roadmap for new pan-European research infrastructures.
- – Knowledge sharing: to improve the exploitation of the results of public research by building on and implementing the Commission Recommendation and Council Resolution on the management of intellectual property in knowledge transfer activities, consisting of policy guidelines for Member States and a Code of Practice for public research organisations and universities.
- – International science and technology cooperation: to establish a common strategy at European level for cooperation between Member States and the European Union with third countries in order to reduce the duplication, waste of resources and reduced impacts which result from the current fragmented approach.
